Dear IICDC-COordinator,

This is to certify that 1057963 participating in the IICDC 2019 have submitted their Idea Proposal under the leadership of Navyashree N has been verified by me and approved

Following are my observations about the Proposed Idea:

Smart Pot is the best container for gardening because it takes care of the plant on behalf of human. This project reduces human work for growing a plant. Nowadays because of our busy lifestyle, we are not able to get enough time to take care of our plants but smart pot will nourish the plant very well by supplying water to the plant when there is necessity. It also monitors the soil moisture content with the aid of a soil moisture sensor, humidity, and temperature using microcontroller which will improve growth rate of the plant.

This Group has the capability to implement and convert their theoretical knowledge to fruitful practical work. This Project has been selected for college funding also. This group has actively participated in various event held in India. Overall, they have proven themselves to have perservance, initiative and intellectual creativity and i would recommend Group for the quarterfinals.

With Regards,

Chandra Singh
